

# Configure a New Bunny Site

Example steps to set up a your bunny.net account to accomodate a new site.

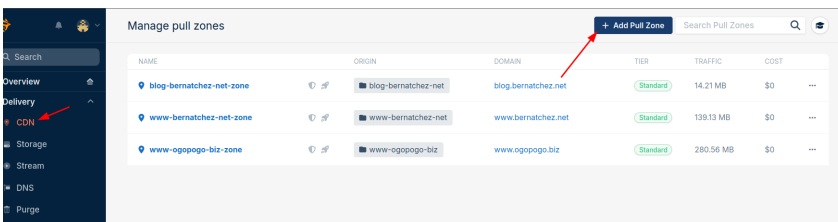

In this example Our new site called: **dummy.example.net**

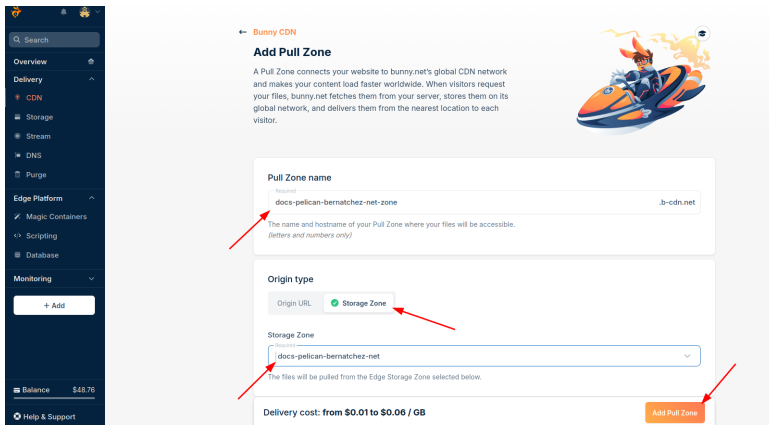

Change your names according to your site name.

1. login to your bunny.net account at: <https://dash.bunny.net/>
2. create a standard storage zone named: **dummy-example-net** <sup>1</sup>

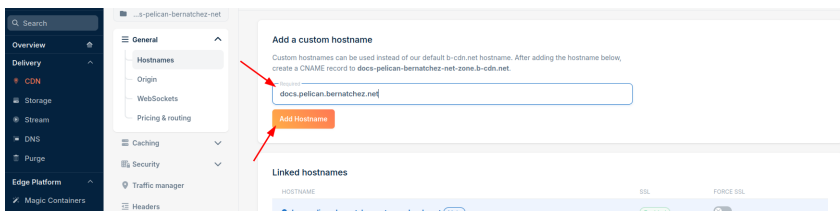

1. create a pull zone named: **dummy-example-net-zone** <sup>2</sup>

1. login to your DNS service account.
2. On your DNS server create a record: **dummy.example.net** CNAME **dummy-example-net-zone.b-cdn.net**
3. Back on bunny.net add a custom hostname **dummy.example.net** to the pull zone <sup>3</sup>

**When you do this add, take the opportunity to confirm certificate is working.**

Now your site is ready to serve. You can publish to it.

- 1 Picture shows "docs-pelican-bernatchez-net" should show "dummy-example-net"
- 2 Shows "docs-pelican-bernatchez-net-zone" should show "dummy-example-net-zone"
- 3 Shows "docs.pelican.bernatchez.net" should show "dummy.example.net"
