

## Getting it on one page

My recipes consist of an image and the instructions to prepare it beneath that. For the sake of ".pdf" printing, I try to fit it all in a single page. That means I must keep the image small.

In practical terms, I take a picture with my cell phone. Then I open that up with the shotwell viewer and I crop the part I want from it.

Then whatever I end up with, I shrink to about 1000 pixels wide.

*shrink command*

```
convert original.jpg -resize 1000x pagefit.jpg
```

*snippet that includes the image in the RST source*

```
|  
.. image:: ../images/pagefit.jpg  
   :class: img-responsive  
   :scale: 30%  
   :alt: The result
```

I have included such an image above as illustration.
